## Profile

I'm 20 years old, Warsaw based man, and I just finished technical school in the IT technician profession with all three computer science certificates available. With over 2 years of experience I was working on different types of projects starting with mobile games, to web and desktop applications. My core skill is software development with C# and .NET core framework and it's tools. I'm good on finding various ways to analyze problems and find them logical solutions.

---

## Key skills

- Languages: Good knowledge of C#, it's features, best design patterns and theoretical background, basics of JS and it's concepts, willing to start learning Rust.
  - OS: Both Windows and Linux Debian based distros.
  - Databases: MariaDB and MySQL, desire to learn NoSQL Dbs.
  - Other: Razor, ASP.NET, WEB API and REST, Apache and Nginx, distributed systems basics.
  - EFSET English Certificate - Score: 63 pts. Advanced (C1), effective operational
- 

## Work History

2018 Intern at Microsoft Polska in IT helpdesk dept.

My duties included: Help in servers management, promoting ideas on company's events, stocktaking

devices and assembling new equipment. This internship helped me to learn lot of networking from practical side.

2018-2019

Working on commercial image board web application.

My duties included: Design database, and distributed backend architecture on host and CDN servers, create linux(Ubuntu) scripts to build and automatically deploy app, configure and manage environments, create frontend code for desktop, mobile and PWA, create API to connect backend with frontend variants.

This whole system is created by me. I have learned a lot thanks to incremental development, which saved my time from learning technologies, and developing application separately. Research made to this project, showed me how to make highly optimized code on desktop and mobile, with offline caching strategies, server optimizations and compressions, and with enabling new features in modern browsers.

Technologies used: frontend – PWA with JS, CSS with materialize framework, Razor pages

backend – ASP.NET core, WebAPI, C#, Ubuntu Linux, MariaDB, Apache and Nginx
